

Landscape Enhancement Burns Beach Road Southern Verge (Marmion Avenue to Delgado Parade), Iluka

Project details:

The overall intent of the project was to initially improve the existing irrigation infrastructure and install a sustainable landscape consistent with other landscape treatments within the close proximity. Works included the removal of existing aged shrubs, boxing out of existing soil and sand to allow for the installation of pathogen free high quality mulch to aid the suppression of weed growth and to improve water retention. The final stage was to install approximately 1400 shrubs and 6 trees suitable for this coastal location. This landscape is in consolidation until the end of November.

The landscape upgrade component of this project has been fully funded via residents contributions from the Iluka SAR. Full consultation and support was received from the Iluka Home Owners Association regarding the design and installation prior to commencement of works.
