

# Naturaliste Park Verge, Iluka – Landscape Enhancement

## Project details:

The overall intent of the project was to create a sustainable landscape that both complements Naturaliste Park and allows the remaining trees to flourish to their full potential. In addition, to improve the visibility of the entire bushland area, which contains a rich natural biodiversity. As a major thoroughfare of the Iluka Estate, it is hoped the proposed improvements will benefit all residents both from an aesthetic perspective and through improved safety by removing the restricted views across this managed natural parkland. Works included the removal and pruning of trees, removal of vegetation and ageing shrubs. The completion of the work involved the removal of excess soil, the installation of mulch and a new section of turf.
